## Failure Mode 1: Multi-Statute Collisions

**Frequency: 48.9% of residual errors (44 cases)**

**Statutory Root Cause:**

Inter-statute priority collisions between general civil provisions (Civil Code 2015, Article 328) and specialized sectoral statutes (Land Law 2013 and Law on Real Estate Business 2014).

**Representative Real Case Study:**

Article 57 of the Law on Real Estate Business restricts advance deposit collection to at most 5% before foundation permits. Some chambers declare contracts void ab initio rather than enforcing double forfeiture under Article 328.

**Architectural Remediation in SynapseLex:**

- Hierarchical Lex Specialis topological weighting via NH-DA
- Differentiable TBox subgradient hinge regularization loss

## Failure Mode 2: Latent Oral Waivers

**Frequency: 32.2% of residual errors (29 cases)**

**Statutory Root Cause:**

Litigants execute unrecorded oral standstill agreements or informal payment deferrals during grassroots conciliation sessions without timestamped written documentation in trial records.

**Representative Real Case Study:**

Trial court minutes report conflicting witness statements regarding informal debt forbearance. The judge admits debtor oral acknowledgment to reset the 3-year clock under Article 157, whereas zero-oracle extractors detect no written reset event.

**Architectural Remediation in SynapseLex:**

- Evidential credibility discounting over disputed verbal testimony
- Dung grounded reasoner with counterfactual rebuttals

## Failure Mode 3: Discretionary Boundary Margins

**Frequency: 18.9% of residual errors (17 cases)**

**Statutory Root Cause:**

Subjective judicial valuation of informal construction investments under the Article 129 Clause 2 curing threshold requiring tender of at least two-thirds (66.67%) of contractual consideration.

**Representative Real Case Study:**

When cash tender is 63% and the buyer made land reclamation or tree planting investments, Southern provincial courts often credit in-kind improvements to exceed 66.7%, whereas Northern courts strictly require monetary installments.

**Architectural Remediation in SynapseLex:**

- Continuous fuzzy degree membership modeling over in-kind tender
- Regional judicial prior calibration via learned embedding bias
